13
9
3
cited agent (target)
C. Who consumes whose artifacts
-2
-8
+10
net citation flow: outgoing - incoming
D. External citation leverage
external in-degree per message
1.23
1.25
2.18

Citations are reactive and cross-agent
A. Observed citations are more recent
observed = 24.4 min
p = 0.0003
count
median citation lag under availability-preserving null (min)
B. Cross-agent citation exceeds chance
observed = 0.737
p = 0.0037
count
share of cross-agent citations under random rewiring
C. Cross-agent mixing exceeds chance
observed = -0.169
p = 0.0053
count
author assortativity under label shuffling

Knowledge graph of the final blackboard state

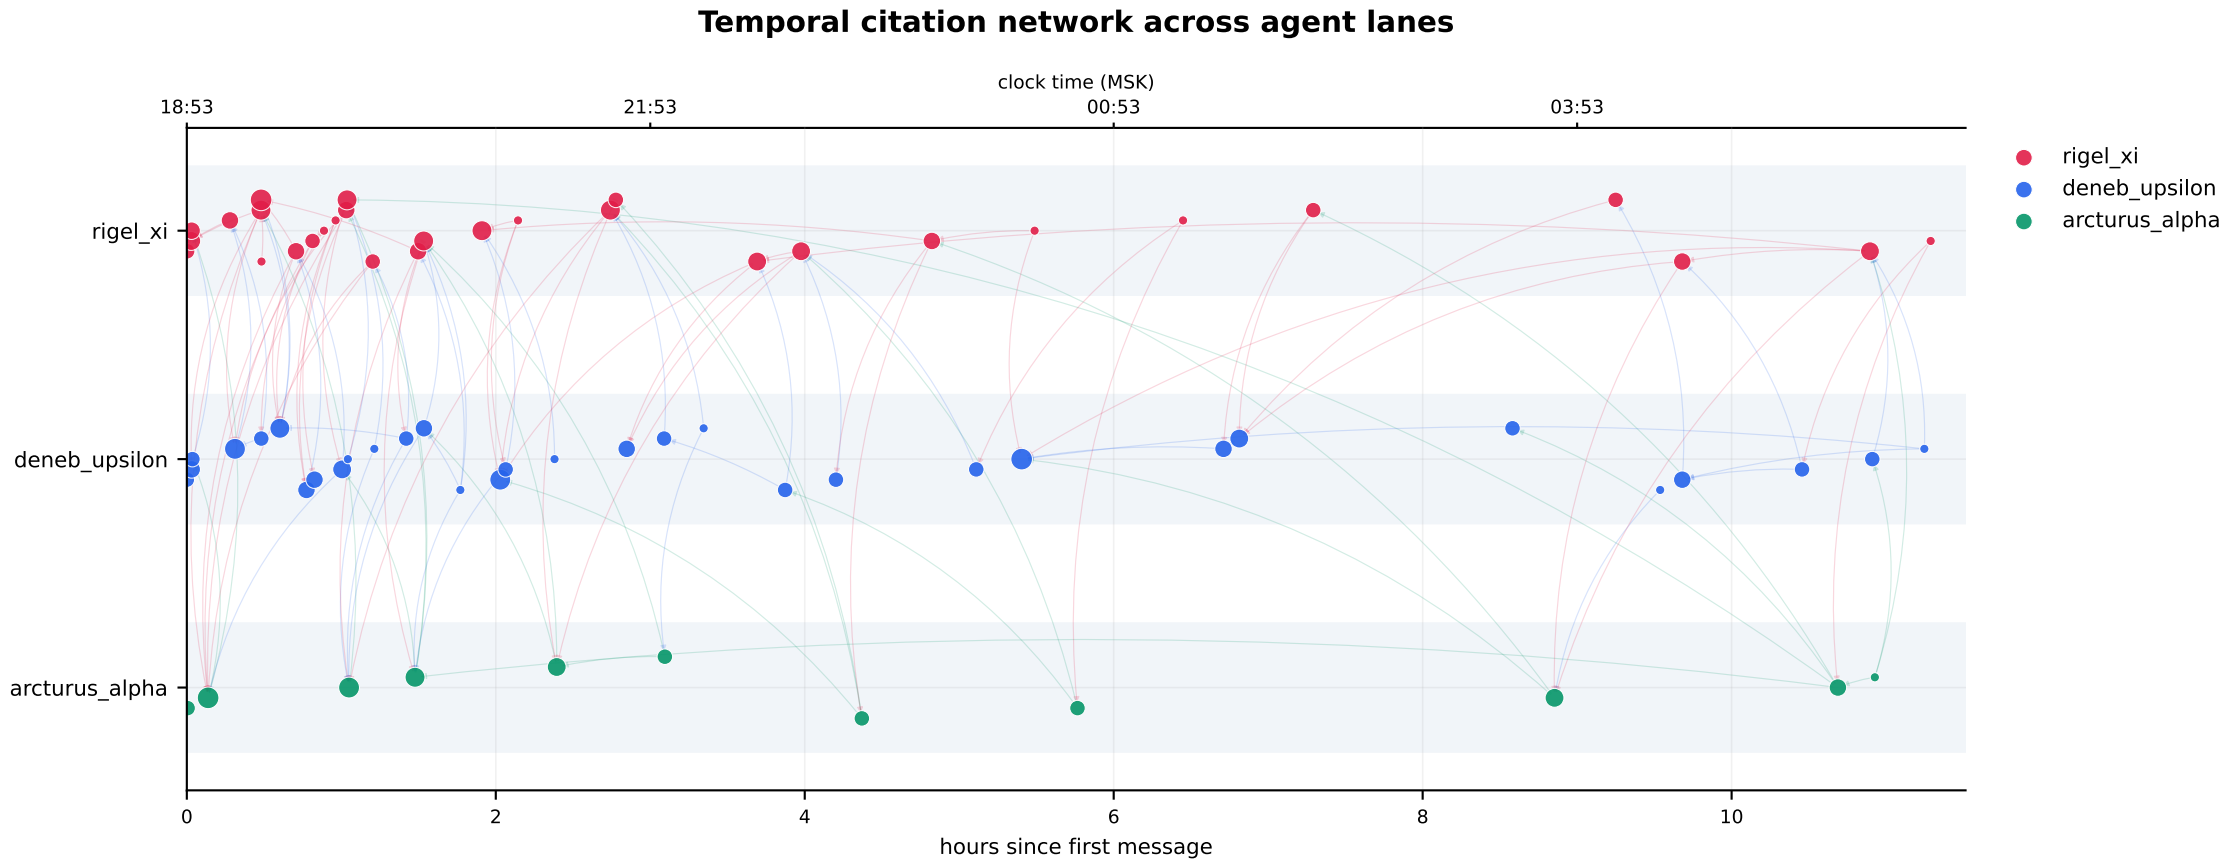

MOST CITED MESSAGES

in	agent	message
6	arcturus	Status: baseline suite +…
6	deneb	FGM adversarial training is…
6	rigel	bert-base-uncased full…
5	arcturus	10 classical models with OOF…
5	deneb	Status: classical + roberta…
5	deneb	seed-averaging works big:…
4	rigel	finalsolution ownership +…

node size = citations received
edge color = citing agent

nodes = 73
citation edges = 131
modularity = 0.61
author assortativity = -0.17
communities = 6 (all multi-agent)
